

Q: What database does PaymentService use?

A: PaymentService uses Payment PostgreSQL as its primary relational database.

Q: Does PaymentService use Redis?

A: Yes. PaymentService depends on Production Redis for caching and fast-access application data.

Q: Does PaymentService depend on other services?

A: Yes. PaymentService depends on NotificationService for sending payment-related notifications.

Q: Where does PaymentService run?

A: PaymentService runs on the production Kubernetes cluster.

Q: Which deployment runs PaymentService?

A: PaymentService is deployed using the payment-service-v2.4.1 deployment.

Q: What are the main dependencies of PaymentService?

A: The main dependencies are Payment PostgreSQL, Production Redis, NotificationService, and the production Kubernetes infrastructure.
